

Product Name :
Flexible Material Explosion-Proof Barrel

Product Code :
EQUP-MC20282-0019

Description :

Flexible Material Explosion-Proof Barrel

Technical Specification :

This product uses special energy-absorbing buffer explosion-proof materials, and adopts a special sewing process to ensure full absorption of the energy generated by explosive fragments, which can restrain the fragments, explosive device parts and wires generated during the explosion process, effectively retaining evidence, and convenient case solving and evidence collection.

Super protection"-can eliminate the harms of shock wave and high-speed fragments of 500g, 1kg, 1.5kg of TNT explosives with a safety distance of 3.5-4 meters.

Flexibility in texture"-no metallic materials: made by non-metallic flexible materials and liquid.

Flexibility in absorbency"-flexible absorbency: absorbing energy with no collateral damage under excessive explosions.

Flexibility in weight"-lightweight and portable: 75-100 kg, portable by single or two men. It is equipped with a 4 or 5 wheel base designed to hold the basket securely in place.

Flexibility in handling"-easy to handle: hollow bottom with a non-contact cover for covering explosives and built-in net pocket for containing explosives.

Flexibility in light"-reducing shock wave and suppressing flame: reducing shock wave and suppressing flame, avoiding explosive fire, reducing psychological harm
